

**EXHIBIT B****Marked-Up Copy of Amended Claims 1 and 3**

1. (Amended) A process for manufacturing solid bodies, comprising the steps of:

adding nutrients including sucrose to water kefir cultures creating a biopolymer mixture of liquid and polysaccharide grains;

separating the polysaccharide grains from the liquid via sieving; and

drying said [mixture] grains to form solid bodies [made of water insoluble dextrans for simplifying removal of the solid bodies from the mixture].

3. (Amended) The process according to claim 1, further comprising the step of pouring the mixture into molds before said step of drying.
